NATIONAL SOCIETY PROFILE

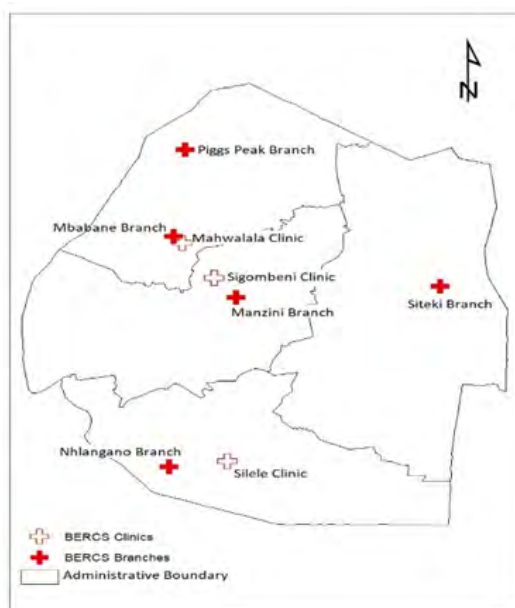

The **Baphalali Eswatini Red Cross Society** was founded in 1933 and was admitted into the International Federation of Red Cross and Red Crescent Societies (IFRC) in its current form in 1979. In 1970, King Sobhuza II, the then patron, named it Baphalali Swaziland Red Cross Society. In the same year, the Baphalali Swaziland Red Cross Act of Parliament legally recognized the National Society's role as an auxiliary to the public authorities to provide humanitarian assistance to those in need.

The National Society's mandate facilitates its cooperation with the government and the administrative authorities, while it remains independent and guided by the fundamental principles of the International Red Cross and Red Crescent Movement. The Baphalali Eswatini Red Cross Society is governed by the national executive committee (board), which is elected by the General Assembly. The board has a total of 14 members, two of which are from the government of Eswatini. The National Society also has a management structure which provides support to the regional offices and oversees the general administration of the National Society while monitoring programme implementation.

The Baphalali Eswatini Red Cross Society continues to provide services to the public on disaster management, healthcare and first aid. These services are provided in collaboration with the deputy prime minister's office. The National Society provides its services to people in Eswatini through five branch offices and three health facilities.

The National Society's Strategic Plan 2021-2025 identifies four broad strategic aims to address the needs of people in Eswatini:

- Disaster management: People anticipate, respond to and quickly recover from crisis
- Health care and livelihood: People lead safe, healthy and dignified lives and have opportunities to thrive
- First aid: People are trained in first aid knowledge and have the skills to provide appropriate care in the event of an emergency
- Community engagement: People mobilize for inclusive and peaceful communities

Map of National Society branches and clinics

The map does not imply the expression of any opinion on the part of the IFRC or the National Society concerning the legal status of a territory or its authorities

IFRC NETWORK ACTION

JOINT SITUATIONAL ANALYSIS

Eswatini is a landlocked country bordering Mozambique to the northeast and South Africa to the east, west and south. It extends about 110 miles (175 kilometres) from north to south and about 80 miles (130km) from west to east. The country is home to major perennial rivers with their sources in South Africa. They flow through Eswatini to the Indian Ocean. Rainfall can be unreliable, and periods of drought occur in some of the regions. About 80 per cent of the precipitation falls during the summer months from October to March, usually in the form of thunderstorms and frontal rains, often bringing floods.

Eswatini has a young population of 1.2 million people, with a median age of 20.5 years. People aged 14 or younger comprise 34 per cent of the total population. Literacy rates are high at 88 per cent, and there is access to education across the country. According to the constitution of Eswatini, the King is a symbol of unity and the eternity of the Swazi nation. For the purposes of local administration, Eswatini is divided into four regions: Hhohho, Lubombo, Manzini and Shiselweni. Each has an administrator appointed by the King. Parallel to the government structure is the traditional system of the King and his advisors, traditional courts, and 59 traditional Tinkhundla chiefdoms.

The staple crop in Eswatini is maize. Other crops such as sorghum (mainly used for brewing beer), pumpkins, beans, peas

and other vegetables are also grown. Crop yields are generally low, but the more progressive farmers produce quantities that match those in the large-scale commercial sector. The livestock population in Eswatini is relatively high because cattle are traditionally used as a store of wealth.

Eswatini's economy is very closely linked to the economy of South Africa. South Africa continues to be Eswatini's main trading partner, accounting for about 65 per cent of its exports and 75 per cent of its imports. Overall, the economy performed well during the first half of 2024, supported by both domestic and foreign demand. Beyond domestically generated income, Eswatini's economy benefits from worker remittances from South Africa. Overall, Eswatini's economy performed well during the first half of 2024, supported by both domestic and foreign demand. However, poverty remains a challenge due to stunted economic growth (which is expected to be 0.9 by 2026), adverse weather patterns, a high prevalence of HIV/AIDS and high unemployment rate (25.8 per cent in 2021, up from 25.5 per cent in 2020).

Persistent food insecurity manifests in chronic malnutrition with 26 per cent of children under 5 experiencing stunting. Eswatini is also facing a drought in the south and east of the country. There is currently no comprehensive social protection policy to address the needs of the extremely poor and chronically vulnerable, potentially condemning future generations to vicious cycles of malnutrition.

A Baphalali Eswatini Red Cross Society volunteer conducting a post-distribution survey with a community member, in June 2023 (Photo: IFRC)

STRATEGIC PRIORITIES

Climate and environment

Eswatini is prone to extreme weather events which have negative impacts on the most vulnerable people especially in the Lubombo and Shiselweni regions. These two regions are the poorest regions of the country and often marginalized. The country is prone to disasters such as drought, windstorms, hailstorms, fall armyworms and invasive species such as *chromolaena odorata*.

Climate change and variability are also evident in Eswatini in other forms, including hydrological disasters (droughts and storms), changes in rainfall regimes, including heavy rainfall events and extreme weather conditions. The country has recently been impacted by large variations in rainfall as well as recurring drought events. This is expected to have an increasingly adverse effect on agricultural production, particularly that of smallholder farmers. This is further exacerbating the country's existing challenges of food insecurity, affecting its ability to attain development goals. Land degradation and resulting erosion is also further exacerbated by heavy rains, increasing vulnerability for more than 70 per cent of the population that is reliant upon the agricultural sector.

Eswatini government has emphasized its priority for climate change which is to mitigate the impacts of climate change through the strengthening and implementation of the National Adaptation Strategy combined with the National Resilience Strategy. These strategies work in complementarity with the NDC, also known as the National Climate Action Plan which was launched in May 2023. The successful roll out of the NDC will enhance climate action and meet the goals of the Paris Agreement, covering 12 priority areas: agriculture, health, water, ecosystems and biodiversity, infrastructure, energy, waste, industry, forestry, gender, youth and disaster risk reduction.

Eswatini launched a national tree planting campaign entitled Hlanyela Sihlahla, Wonge Imvelo (Plant a Tree and Save the Environment). The campaign aims to plant 10 million trees of indigenous and high-value species in Eswatini over the next five years, to help mitigate the effects of climate change. The tree planting will support improved livelihoods, reduce land degradation, improve nature conservation, increase biodiversity, build resilience to climate change in the long run.

Multi-year high level objectives of the National Society

The Baphalali Eswatini Red Cross Society aims to actively support the reduction and adaptation to the rising and evolving risks from the climate and environmental crises by participating in environmentally sustainable practices that contribute to

mitigation of risks associated with climate change. Through its programmes it will strengthen community resilience to climate change and disasters by integrating Anticipatory Action into the disaster risk management cycle. The National Society also works to incorporate climate risks into its ongoing programmes and operations by improving preparedness and early warning systems to address the increasing intensity of disasters such as floods and storms. Additionally, the Baphalali Eswatini Red Cross Society seeks to expand partnerships with development organizations to further strengthen climate change mitigation efforts and contribute to global initiatives.

The Baphalali Eswatini Red Cross Society is part of the global Pilot Programmatic Partnership (PPP) between the IFRC and the European Commission's Directorate-General for European Civil Protection and Humanitarian Aid Operations (DG ECHO) with implementation support from the Finnish Red Cross, the Belgian Red Cross and the IFRC. Through the ECHO PPP, the Baphalali Eswatini Red Cross Society will apply a climate-smart agriculture approach that is customized to the Swazi context. The National Society will support households to produce food in difficult climatic conditions.

Planned activities in 2025

- Set up climate focal points and climate working groups
- Carry out national climate risk assessments and climate-smart screening
- Conduct awareness raising sessions and activities for community, including school-based activities on adapting to and reducing climate-related risks
- Design and implement nature-based solutions
- Design and implement interventions around climate-smart agriculture and livelihoods
- Develop its environment policy
- Promote green logistics and supply chain practices
- Pilot new initiatives such as address environmental issues household energy and clean cooking; community waste management and recycling; tree planting and care; and carbon market projects
- Launch campaigns to mobilize climate change mitigation efforts and influence behaviour change

Longer-term support from the IFRC network

The IFRC supports the Baphalali Eswatini Red Cross Society in systematically integrating climate change adaptation and mitigation measures to reduce the impact of climate change while aligning short- and long-term projects, programmes

and operations. It provides training for National Society staff and volunteers on community engagement, with a focus on behaviour change approaches for climate adaptation. It assists the National Society in advancing community-driven solutions to address challenges, foster positive behaviours and promote climate action.

The IFRC will provide the National Society with technical support in conducting national climate risk assessments, implementing climate-smart screening and developing multi-year climate strategies, including setting targets for the climate and environment charter. It will also help strengthen the National Society's capacity to build strategic partnerships to expand environmental initiatives, including planting and maintaining multipurpose trees. The IFRC will also continue

supporting the National Society to expand its forecast-based financing approach, which will initiate activities taking into consideration extreme weather events such as droughts. It will identify relevant environmental screening tools, such as the Nexus Environmental Assessment Tool (NEAT+), along with training and piloting.

Under the global Pilot Programmatic Partnership between the IFRC and the Directorate-General for European Civil Protection and Humanitarian Aid Operations (DG ECHO) and with implementing support from the **Belgian Red Cross (Flanders)** and **Finnish Red Cross**, support has been provided to the National Society for the implementation of a climate-smart agriculture approach that is customized to the Swazi context.

Disasters and crises

For real-time information on emergencies, see [IFRC GO page Eswatini](#).

Eswatini is prone to disasters and crises of different magnitudes. While windstorms and hailstorms are the most commonly occurring natural hazards, droughts affect the highest number of people severely. Drought not only destroys crops but also leads to livestock death. Eswatini also experiences heavy storms every year, usually starting in September. The main impact of these events is on housing, damaging or destroying roofs and other possessions. In recent years, Eswatini has experienced several disasters that have contributed to the economic challenges currently faced by the country.

Food insecurity continues to be a concern. According to the IPC Acute Food Security Analysis for the projected period (October 2024 to March 2025), an estimated 270,000 people are classified in IPC Phase 3 (Crisis) and 34,000 are in IPC Phase 4 (Emergency). This mostly includes resource-poor vulnerable households faced mainly with chronic food insecurity.

The impacts of climate-related disasters extend to public health. Droughts and food insecurity can exacerbate existing health issues, particularly among vulnerable populations such as women and children. Additionally, the stress on water resources can lead to sanitation challenges, increasing the risk of waterborne diseases. These disasters have hindered the country's ability to effectively address the requirements of its citizens, particularly those who are most vulnerable.

The Government enacted the Disaster Management Act in 2006 and the Disaster Management Policy in 2010, forming a legal framework for disaster risk reduction in the country. The National Disaster Management Agency's strategic plan aims for a substantial reduction in disaster risk and loss, by harnessing the power of coordination and cooperation.

Multi-year high level objectives of the National Society

The Baphalali Eswatini Red Cross Society aims to strengthen community-based disaster risk reduction initiatives by strengthening capacities of community members to withstand, adapt to and recover from adverse socio-economic and climate-induced events. It seeks to increase the resilience of communities and institutions by fostering disaster preparedness initiatives and promoting sustainable practices in disaster risk reduction. The National Society will also focus on putting a rapid, effective and well-coordinated emergency response in place to save lives and protect property. Additionally, it will optimize the coordination of resources and services during disaster response and recovery phases. Its high-level objectives include to:

- Build resilience through the distribution of food, cash transfers, health and nutrition and strengthening community assets
- Expand disaster law capacity and leadership to effectively respond to the wide spectrum of evolving crises thereby strengthening its auxiliary role and disaster risk management
- Collaborate with the Government on Zero Hunger and other national plans

Planned activities in 2025

- Support and train disaster management committees to scale up community-led disaster risk reduction (DRR) activities in urban and rural areas, including enhanced vulnerability and capacity assessments (eVCA)
- Develop a strategic plan for reducing disaster risk (including climate risk), particularly in high-risk areas, with

identified priority areas for action, aligned with existing/ planned projects

- Raise awareness on disaster risk reduction and disaster preparedness via radio, theatre and other means
- Establish community early warning systems (CEWS), ensuring effective linkages with the national early warning system
- Provision of shelter assistance through conditional cash and voucher assistance (CVA)
- Provide training to the staff and volunteers on forming regional response teams (RRT)
- Provide timely response to disaster affected communities through cash and voucher assistance
- Improve the capacity of construction workers through community-level training
- Provide food security and livelihoods (FSL) safety nets to support basic needs, prevent asset depletion and protect livelihoods of vulnerable low-income households
- Undertake advocacy activities to engage authorities in the development and adoption of tripartite pre-disaster agreements

Longer-term support from the IFRC network

The IFRC will support the Baphalali Eswatini Red Cross Society in strengthening its capacity for preparedness and readiness, enabling it to anticipate and respond to crises in a timely, appropriate and accountable manner. It will provide] access to essential tools and resources for effective crisis and disaster response while assisting in risk identification, addressing gaps in response systems and applying emergency response tools to meet operational needs. This includes support for disaster response emergency funds and emergency appeal capacity strengthening, surge tools and planning, monitoring, evaluation and reporting (PMER) standardization. It offers technical assistance to the National Society across all pillars of preparedness for effective response (PER) and the implementation of its plan of action. Additionally, it provides expertise and support in developing anticipatory action systems, including forecast analysis, contingency planning and early warning and early action measures.

Through the DG ECHO-IFRC Pilot Programmatic Partnership the National Society will be supported in increasing its capacity in disaster risk management. Its staff and volunteers will be supported to engage communities in selecting beneficiaries and determining suitable cash grants for basic needs or livelihood protection. Efforts will focus on increasing livelihoods support while reducing reliance on multi-purpose cash grants. The National Society will also receive support in strengthening cash and voucher assistance (CVA) management.

Health and wellbeing

In Eswatini, the main causes of morbidity and mortality are lower respiratory infections, diabetes, tuberculosis and diarrhoeal diseases. The risk factors that drive most morbidities, disabilities and death are unsafe sex, malnutrition, dietary risk, water, insufficient sanitation and hygiene and intimate partner violence. The under-five mortality rate stands at 47 deaths per 1,000 live births, while the infant mortality rate is currently 37 children per 1,000 live births.

Eswatini is battling with conditions such as tuberculosis and other non-communicable diseases (NCDs). In Eswatini, approximately 37 per cent of hospital beds are occupied by individuals grappling with these health conditions. Most prominent NCDs are cardiovascular disease (CVD), type-2 diabetes, cancer and chronic obstructive respiratory diseases. The Government has a running NCD programme aimed at addressing these threats.

Eswatini has the highest HIV prevalence globally with a prevalence rate of 27 per cent among 15- to 59-year-olds. Women are disproportionately affected, with 120,000 (63.16 per cent) out of the 190,000 adults living with HIV being

women. New HIV infections among young women aged 15–24 years were more than four times higher than those among young men.

Eswatini is trying its best to meet the minimum recommended distance that patients need to travel when they seek medical assistance in health facilities. In Eswatini, some people still travel more than 15–20 kilometres to the nearest health facility, yet the recommended maximum distance is 5 kilometres. In addition to this challenge, the country is financially unable to provide adequate drugs and medication in these facilities. Staffing is also an issue, as the country is a long way from matching the recommended patient to health worker ratio.

There is a low level of investment, coordination and partnerships in the health sector, in terms of clean water, basic toilets and good hygiene practices. Influencing changes in behaviour towards good hygiene practices, while ending open defecation, also remains a national challenge. There is a clear discrepancy in access to water, sanitation and hygiene between rural communities, urban areas and the growing informal settlements around urban centres.

Multi-year high level objectives of the National Society

The Baphalali Eswatini Red Cross Society seeks to strengthen community health systems by integrating its volunteers into primary health care services. It aims to provide differentiated models of care by incorporating HIV and non-communicable disease management at the community level. The National Society works to protect and improve community health and well-being by ensuring access to sustainable, affordable, appropriate and quality health services across all stages of life. It also seeks to expand access to affordable, appropriate and environmentally sustainable water, sanitation and hygiene (WASH) services for communities at risk from pandemics and epidemics.

Planned activities in 2025

- Develop a health strategy and participate in public health forums such as nutrition national forum and public health emergency operations centre
- Advocate for early, coordinated and sustained mental health and psychosocial support in response to critical events
- Conduct outreach services, household visits and door-to-door health promotion activities
- Conduct community assessments using and train communities to map health risks and service providers
- Establish referral pathways for sexual and gender-based violence survivors
- Train volunteers in community-based surveillance systems and provide First Aid and mental health and psychosocial support training for staff and volunteers
- Carry out water, sanitation and hygiene (WASH) preparedness activities, including capacity building of technicians and volunteers

Migration and displacement

Eswatini has had a long history of migration, both internal and external. Traditionally, cross border migration was a male preserve with the majority of migrants headed for the South African mining industries. Increasingly, women also have been participating in migration, mainly seeking domestic work and for the sale of craft in neighbouring countries.

While a significant proportion of rural households and an increasing number of urban-based informal settlements in Eswatini rely on migrant remittances for their sustenance,

- Raise awareness on menstrual hygiene management and deliver WASH services in rural and urban areas

Longer-term support from the IFRC network

The IFRC will support the Baphalali Eswatini Red Cross Society in strengthening community health resilience and care by addressing immunization, non-communicable diseases and the prevention and control of major disease threats such as HIV, tuberculosis and malaria. It will provide technical support in training of trainers in non-communicable diseases, mental health and psychosocial support, and pandemic and epidemic preparedness. The IFRC will also support the National Society in strengthening community action to reduce risks and respond to health emergencies arising from disasters, epidemics, technological accidents or population movement.

Through the DG ECHO-IFRC Pilot Programmatic Partnership the National Society will continue to increase the capacity to prepare and respond to epidemics and pandemics. The National Society staff that were trained in enhanced community-based health and first aid (eCBHFA) will carry out community health promotion activities to raise awareness and prevent the spread of diseases. The Baphalali Eswatini Red Cross Society will be supported to collaborate with the Eswatini National Blood and Transfusion Services through a memorandum of understanding to conduct blood donor drives and strengthen the national blood supply. Support will also be given to its ambulance services and clinics. The National Society will be supported to enhance first aid capacity by expanding quality improvement initiatives, introducing First Aid for First Responders to new groups and implementing First Aid Blended Learning to reduce training costs and increase revenue through commercial first aid initiatives.

high population mobility has been identified as one of the key drivers of the AIDS epidemic. It has also made the migrants vulnerable to increasing xenophobia, human trafficking and drug dealing.

Incoming migration is mainly from South Africa and Mozambique, with most of these migrants being settled in the Malindza refugee camp. The Government of Eswatini provides support to migrants and offers assistance in various forms.

Multi-year high level objectives of the National Society

The Baphalali Eswatini Red Cross Society will focus on supporting migrants and displaced persons and ensure that they receive dignified services and access to assistance and protection. The National Society will continue to assist with restoring family links activities such as providing telephonic service to migrants in the camp, which enables people to communicate with their families back home on quarterly basis. The National Society aims to ensure that essential needs of displaced persons are met through assistance and protection services, including through humanitarian service points (HSPs).

Planned activities in 2025

- Collaborate with Ministry of Home Affairs and UN agencies in provision of essential services to asylum seekers and migrant workers in vulnerable situations
 - Strengthen the capacity of National Society staff and volunteers to respond effectively to the needs of migrants and displaced people
-

Longer-term support from the IFRC network

The IFRC is committed to providing longer-term support to migrants and displaced people in Eswatini and will assist in addressing the existing challenges to improve their lives. The IFRC will support the Baphalali Eswatini Red Cross Society to strengthen the implementation of the integrated approach in responding to the needs of the migrants and displaced populations. It will support the National Society in advocating for the rights of migrants and displaced people through strengthening collaborations and working with governments and other stakeholders to ensure that their rights are respected and protected. It will also work to strengthen the capacity of the National Society to respond to the needs of migrants and displaced people through training, technical assistance, and funding.

The **British Red Cross** will be supporting the National Society to ensure that migrants and displaced people are given the necessary support by restoring family links (RFL) and that their other needs are met.

Under wider Movement support the **International Committee of Red Cross (ICRC)** will provide support to the National Society in providing restoring family links services.

Values, power and inclusion

Eswatini has made progress in its efforts towards 'education for all' by introducing free primary education in 2010, which was reinforced in the Free Primary Education Act of 2010. Primary school attendance is 95 per cent with no gender, rural and urban differences. However, school completion rate declines as the level of education increases. The primary school completion rate stands at 80 per cent, the lower secondary school completion rate is 57 per cent, and the completion rate for higher secondary school is 37 per cent. On the other hand, less than half (46 per cent) of children 3-6 years are developmentally on track in Eswatini.

In Eswatini, 1.16 million people live with disabilities, with women making up 58 per cent and men 42 per cent. Vision impairment is the most common disability, affecting 32.6 per cent of persons with disabilities, followed by mobility challenges. Difficulties in communication are the least prevalent, affecting 4.7 per cent. The vast majority—82 per cent—of persons with disabilities reside in rural areas, reflecting the country's predominantly rural population, while 18 per cent live in urban areas. Rural women have the highest prevalence of disability, at 17.4 per cent.

Women and girls with disabilities are particularly vulnerable to sexual violence, often due to both their heightened vulnerability and the perception that perpetrators are unlikely to face prosecution. Access to justice remains a significant challenge for women with disabilities, who encounter systemic barriers in seeking legal redress. Additionally, women with disabilities are often marginalized in both gender-focused and disability advocacy initiatives, limiting their representation and participation in critical programs and policies.

Violence in Eswatini affects people across all demographics and can occur in homes, communities and workplaces. The 2022 Eswatini Violence Against Children and Youth Survey found that 25.5 per cent of females and 31.7 per cent of males aged 13–24 have experienced some form of violence in their lifetime. Sexual violence disproportionately affects females, with 8.1 per cent reporting lifetime experiences compared to 3.3 per cent of males. Among them, 5.5 per cent of females and 2.1 per cent of males experienced sexual violence during childhood. While sexual violence is more prevalent among females, males are significantly more affected by physical violence, with 23.2 per cent reporting experiences compared to 10.5 per cent of females. Physical violence by peers is nearly five times more common among males than females.

Multi-year high level objectives of the National Society

The Baphalali Eswatini Red Cross Society seeks to foster positive change in communities by promoting a deeper understanding, ownership and practical application of humanitarian values and fundamental principles, with a particular focus on improving young people's knowledge, skills and behaviour. It aims to ensure equitable access to quality education and healthcare for all boys and girls affected by disasters, crises or displacement. The National Society also aims to implement a comprehensive strategy on protection, gender and inclusion. It will continue to advocate for the collection of disaggregated data on persons with disabilities across all programmes.

Additionally, the National Society will focus on implementing interventions for the creation of a violence-free environment in Eswatini, with the overall goal to reduce all forms of violence in the country by 50 per cent by 2027.

Planned activities in 2025

- Engage and collaborate with education authorities and other relevant stakeholders
 - Develop and implement quality humanitarian education programmes, ensuring safeguarding and protection, gender and inclusion (PGI) considerations are included
 - Conduct PGI organizational assessments using the revised PGI organizational assessment toolkit
 - Conduct training on Red Cross humanitarian values and fundamental principles for volunteers and communities
 - Strengthen and adapt referral systems to ensure safe support for all gender identities, including survivors of sexual and gender-based violence
 - Roll out and monitor the use of PGI minimum standards emergencies toolkit
 - Establish a mechanism to develop and deploy PGI rapid responders
-

Longer-term support from the IFRC network

The IFRC will support the Baphalali Eswatini Red Cross Society to adopt and implement community engagement and accountability and protection, gender and inclusion minimum standards in emergencies, ensuring participatory approaches that align humanitarian assistance with community preferences, prioritize safety and target those most in need based on vulnerability analysis. It will also support the development and implementation of procedures for investigating and addressing concerns related to the prevention of sexual exploitation and abuse and child safeguarding, including enhancing investigation capacity, clarifying and promoting reporting mechanisms and strengthening referral systems. Support for these interventions will also be provided by the **British Red Cross**.

Through the DG ECHO-IFRC Pilot Programmatic Partnership the Baphalali Eswatini Red Cross Society will be supported to train its prevention of sexual exploitation and abuse Committee to manage and investigate violations, including sexual exploitation and child abuse. Support will include identifying and training protection, gender and inclusion champions to advocate for protection and provide psychological first aid. The National Society will be supported to engage Organizations for People Living with Disabilities and strengthen partnerships with entities responding to sexual and gender-based violence, child protection and PSEA for effective case referrals. It will also be supported to implement risk communication and community engagement activities and participate in national social protection meetings. The National Society will be supported to adopt and validate the IFRC protection, gender and inclusion policy and a minimum standards handbook for staff and volunteers. Additionally, the National Society will receive support to print materials for referral and support services and strengthen its capacity through regional and national exchange programmes and surge learning opportunities within the Movement.

ENABLING LOCAL ACTORS

The Baphalali Eswatini Red Cross Society is committed to pursue its institutional strengthening and has carried out the self-assessment part of the Organizational Capacity Assessment and Certification (OCAC) process in 2017. The self-assessment part of the process is intended to capture the strengths and weaknesses of National Societies as a whole in relation to a wide range of organizational capacities. The National Society is also committed to the preparedness for

effective response (PER) process and is at the action and accountability phase. The PER approach is a continuous and flexible process that enables National Societies to assess, measure and analyze the strengths and gaps of its preparedness and response mechanism, and ultimately take necessary action to improve it. The IFRC is committed to support the National Society's institutional strengthening in line with its priorities.

Strategic and operational coordination

Multi-year high level objectives of the National Society

- Strengthen its coordination and collaboration with key national and sub-national stakeholders including authorities, civil society, the private sector and research institutions

- Strategically position itself through strengthened engagements with partners to work collectively on the key challenges facing communities
- Develop a resource mobilization plan of action

Longer-term support from the IFRC network

The IFRC will work with the National Society to build its capacity to develop deeper, more diverse, and innovative strategic partnerships which could lead to funding opportunities.

National Society development

Multi-year high level objectives of the National Society

- Strengthen its financial sustainability through investment and leadership engagement in the three pillars of financial sustainability
- Focus on strengthening its commercial first aid and ambulance services
- Focus on the development of a branch development framework
- Implement its core cost policy
- Strengthen volunteer learning and peer-to-peer exchange opportunities

- Develop standards for volunteer safety, security and wellbeing

Longer-term support from the IFRC network

The IFRC will continue to provide technical and financial support to the National Society to encourage financial sustainability initiatives and will support components such as the youth programming, volunteering and core cost policies and statutes review along with transformational leadership. The IFRC will work with the National Society to identify development priorities and help with branch development and ensure that financial resources are used effectively by ensuring adherence to the budget.

Humanitarian diplomacy

Multi-year high level objectives of the National Society

- Develop a perception survey of its activities and impact
- Organize regular meetings at a senior level with relevant ministries and governmental departments, both for advocacy and profiling purposes
- Map critical stakeholders to build relationships with and influence

Longer-term support from the IFRC network

The IFRC will provide the National Society with technical support to work closely with public authorities in executing its auxiliary role. It will also work with the National Society to enhance its visibility and influence policy.

Accountability and agility (cross-cutting)

Multi-year high level objectives of the National Society

- Review and strengthen safeguarding mechanisms
- Create a community engagement and accountability (CEA) performance measurement framework
- Adopts, implement and monitor strategies and action plans to prevent fraud and corruption
- Rollout its risk management policy through an implementation plan for risk management policy and framework
- Focus on digital transformation

Longer-term support from the IFRC network

The IFRC support to the National Society to undertake planning, monitoring, evaluation and reporting (PMER) initiatives that encompass innovative monitoring and evaluation of projects, along with advocacy for information management capacity and digitalization of monitoring and evaluation systems. It will also support the National Society to enhance digital transformation initiatives throughout its programmes and operations.

THE IFRC NETWORK

The IFRC

The IFRC's Southern Africa country cluster delegation, with an office based in South Africa since 2010, currently works with five National Societies in the region, namely, Botswana, Eswatini, Lesotho, Namibia and South Africa. The IFRC support to the Baphalali Eswatini Red Cross Society centres on strategic and

operational coordination, National Society development and humanitarian diplomacy, including strengthening its auxiliary role. It also supports accountability as a cross-cutting theme.

Baphalali Eswatini Red Cross Society conducting a training in planting drought-resistant crops with community members in the Shiselweni region of Eswatini, in April 2023 (Photo: IFRC)

IFRC membership coordination

IFRC membership coordination involves working with member National Societies to assess the humanitarian context, humanitarian situations and needs; agreeing on common priorities; jointly developing common strategies to address issues such as obtaining greater humanitarian access, acceptance and space; mobilizing funding and other resources; clarifying consistent public messaging; and monitoring progress. This also means ensuring that strategies and programmes in support of people in need, incorporate clarity of humanitarian action, links with development assistance, and efforts to reinforce National Societies in their respective countries, including through their auxiliary role.

The Baphalali Eswatini Red Cross Society is part of the DG ECHO and the IFRC [Pilot Programmatic Partnership](#), between the DG ECHO and IFRC, and as such, is receiving the implementation support of the **Finnish Red Cross** (the lead EU National Society), **Belgian Red Cross (Flanders)**, as well as the coordination support of the IFRC. The **Finnish Red Cross** and **Belgian Red Cross (Flanders)** provide support to the National Society in the areas of disaster risk management, epidemic and pandemic preparedness and response, cash and voucher assistance and [community engagement and accountability](#). This partnership meets the realities of extended crises with longer-term predictable funding, facilitating actions and processes with the potential for greater, longer-term impact. It leverages the IFRC's global network and unique access to people and communities, and it helps to fulfil the ambitions of the European Union as the world's biggest international donor for humanitarian assistance. The partnership is scheduled to end in mid-2025.

The National Society is working closely with the following in-country participating National Societies in the following thematic areas:

The **Belgian Red Cross (Flanders)** has had an active partnership with the Baphalali Eswatini Red Cross since 2015. During two consecutive regional first aid programmes (2015–2017, 2019–2021), the national first aid capacity of the National Society (both at community level and commercially) was strengthened with a focus on quality, standardization and institutionalization. During the COVID-19 crisis (2020–2021), a project was established to support the Baphalali Eswatini Red Cross Society nationally to raise awareness, promote water, sanitation and hygiene practices and purchase protective equipment. In recent years, the Belgian Red Cross (Flanders) has incorporated its vast national blood expertise in international projects and supported the National Society in Eswatini with blood collection management.

The **British Red Cross** provides support to the National Society with forecast-based financing, food security and livelihoods, water, sanitation and hygiene and National Society development.

The **Finnish Red Cross** maintains an office at the National Society's headquarters in Mbabane and has been providing support in food security, health, community resilience and organizational development since 2001. The support has had a strong focus on food security and HIV/AIDS projects funded by DG DEVCO, drought relief, food security and nutrition funded by DG ECHO, and livelihoods, nutrition and organizational development funded by Ministry for Foreign Affairs of Finland.

Movement coordination

The Baphalali Eswatini Red Cross Society ensures regular exchanges with the IFRC, the International Committee of the Red Cross and participating National Societies, for the alignment of support and action between Movement partners. In times of emergencies, closer coordination is organized. This is carried out in line with the Strengthening Movement Coordination and Cooperation (SMCC) principles, and the newly-adopted [Seville Agreement 2.0](#).

The **ICRC** provides support to the National Society in restoring family links, addressing civil unrest and volunteer and staff capacity building. It also provides support to the National Society with [Safer Access](#) training to address civil unrest.

Coordination with other actors

In line with its auxiliary role, all humanitarian interventions of the Baphalali Eswatini Red Cross Society are coordinated with the Office of the Deputy Prime Minister through the Disaster Management Department and National Drought Management Authority. In times of emergencies, the National Drought Management Authority coordinates all interventions by humanitarian agencies with support from other UN agencies through the Command-and-Control Centre.

The National Drought Management Authority has several sectoral technical working groups focused on specific areas, and the National Society has a representation in the following: food security, agriculture and livelihoods, health, nutrition, HIV/AIDS, social protection, security and education. Close coordination with relevant authorities is ensured at all levels, from constituency to regional and national levels. The National Society has a permanent seat on local disaster management committees. At regional level, the National Drought Management Authority and the National Society's technical officers work together in assessments, response and other support areas. In addition, the National Society engages traditional leadership systems at community level.

Epidemic and pandemic preparedness and response activities are closely coordinated with the Ministry of Health and development partners such as the World Health Organization and UNICEF.

For food security and livelihoods, the National Society sustains a constant operational dialogue with the World Food Programme, which has implemented a significant assistance intervention in Eswatini. Coordination in terms of geographical locations, delivery approaches, feedback and complaint mechanisms, and joint targeting and monitoring tools between the Baphalali Eswatini Red Cross Society and World Food Programme have been ongoing since 2016.

Another key organization with which the National Society will continue close coordination is World Vision, which plays an important role across the country – particularly in Shiselweni – in supporting longer-term livelihood protection and water, sanitation and hygiene initiatives for communities affected by drought.

The Baphalali Eswatini Red Cross Society is also working in partnership with Africa Centre for Diseases Control (CDC) and LAF (LARS Amundsen Foundation), local corporates, individuals and the government of the Kingdom of Eswatini. Some of these partners provide both financial and technical support to the National Society. The National Society is also part of the food security cluster and the disaster risk management cluster, under the National Disaster Management Agency (NDMA), where plans and updates are shared.

The International Federation of Red Cross and Red Crescent Societies (IFRC) is the world's largest humanitarian network, with 191 National Red Cross and Red Crescent Societies and around 16 million volunteers. Our volunteers are present in communities before, during and after a crisis or disaster. We work in the most hard to reach and complex settings in the world, saving lives and promoting human dignity. We support communities to become stronger and more resilient places where people can live safe and healthy lives, and have opportunities to thrive.

About the plan

The plan reflects the priorities of the host National Society, the IFRC and National Societies providing international support, for 2025 and subsequent years. It is aligned with IFRC [Strategy 2030](#), representing the collective ambitions of the IFRC membership, and is the result of a joint planning process and will serve for joint monitoring and reporting. It will be revised on an annual basis to adjust priorities and funding requirements to the needs in-country.

Explanatory note on funding requirements and definitions

- The total funding requirements show what the IFRC network seeks to raise for the given year through different channels: funding through the IFRC, through participating National Societies as bilateral support, and through the host National Society from non-IFRC network sources. All figures should include the administrative and operational costs of the different entities
- Host National Society funding requirements not coming from IFRC network sources can comprise a variety of sources, as demonstrated when reporting on income in the [IFRC Federation-wide Databank and Reporting System](#)
- Participating National Society funding requirements for bilateral support are those validated by respective headquarters, and often represent mainly secured funding
- IFRC funding requirements comprise both what is sourced from the IFRC core budget and what is sought through emergency and thematic funding. This includes participating National Societies' multilateral support through IFRC, and all other IFRC sources of funding
- Figures for the years beyond 2025 most often represent partial requirements that are known at time of publication. Many National Societies have annual internal approval processes for funding requirements, and lower figures do not mean a decrease in funding requirements in future years
- Missing data and breakdowns: data may not be available from all IFRC network members for funding requirements. This may lead to inconsistencies across different reporting tools as well as potential under-estimation of the efforts led by all
- Reporting bias: the data informing this Federation-wide overview is self-reported by each National Society (or its designated support entity) which is the owner and gatekeeper, and responsible for accuracy and updating. IFRC tries to triangulate the data provided by the National Societies with previous data and other data in the public domain
- **Definitions:**
 - » **Local units:** ALL subdivisions of a National Society that coordinate and deliver services to people. These include ALL levels (provincial, state, city, district branches, sections or chapters, headquarters, and regional and intermediate offices, as well as community-based units)
 - » **Branches:** A Branch has its roles, responsibilities and relationship with the National Headquarters defined through the National Society's Statutes, including the level of autonomy given, especially in the area of its legal status, mobilising local resources and building local partnerships, and the decisions it makes. It has a local-level decision-making mechanism through its Branch members, board and volunteers, equally defined through the National Society's Statutes
